

# H<sub>2</sub>OKINETIC®: THE SCIENCE OF A BETTER SHOWER

Each H<sub>2</sub>Okinetic showerhead, hand shower and body spray contains an internal system that controls the velocity, movement and droplet size of the water. This creates the feeling of more water without using more water.

## Intensity

The high-velocity water exiting the showerhead creates the feeling of more pressure.

## Warmth

Larger droplets and a dense spray pattern result in a warmer shower.

## Coverage

The unique water pattern creates the feeling of 3X the coverage of a standard showerhead.\*

## Features

- Self-cleaning H<sub>2</sub>Okinetic spray holes help prevent lime and mineral buildup over time
- Multi-setting showers available
- No moving parts to wear out over time

## The Science of Fluidics

Fluidics is the science of delivering water in motion.

1

H<sub>2</sub>Okinetic showers work by controlling the movement and droplet size of water, which creates the feeling of a high-pressure shower experience.

2

Water moves through channels inside the fluidics chip to control the water's movement without moving parts.

3

The oscillating stream creates a fan of moving, or kinetic, water with larger droplets to enhance your showering experience.
