GreenZone Community Education Center | Los Angeles, California
DELTA® FAUCET TAUGHT GUESTS AT GREENBUILD 2016 HOW RESPONSIVE SUSTAINABILITY CAN BE.

GreenZone, a modular unit within the show, served as a classroom for attendees.

Greenbuild, a creation of the U.S. Green Building Council (USGBC), is the world’s largest green building conference and expo. Starting on October 5, 2016, it welcomed thousands of attendees into the Los Angeles Convention Center to witness the latest developments in sustainable building. Within the show, a special draw was the GreenZone Community Education Center: a 600-square-foot prefabricated classroom that featured Delta product at its heart.

Achieving sustainability while delivering performance.

In a state where the California Energy Commission’s Title 20 requirements have challenged many manufacturers to revisit their products’ water efficiency, Delta Faucet—a longtime WaterSense® partner, and recipient of more than one WaterSense Partner of the Year award—impressed attendees with its ability to meet usage standards while delivering a remarkably satisfying experience. The company’s contribution to the GreenZone was a heavy-duty, cast-brass faucet with a gooseneck spout, a polished chrome finish and a flow rate of 1.5 gpm. Sturdy, vandal-resistant features enhanced the product’s combination of reliable performance and handsome design.

A continuing education in L.A.’s Compton neighborhood.

When Greenbuild 2016 ended on the evening of October 7, 2016, the GreenZone Community Education Center took on a new educational role. Both GreenZone and the Delta product within were donated to Compton YouthBuild—a construction training project that helps youths in L.A.’s Compton neighborhood rebuild their community, while honing skills that may someday push the boundaries of sustainability even further.
